## MICRO MIST SYSTEM

[sales@jxi.co.za](mailto:sales@jxi.co.za)

071 213 7705

Unlike traditional methods, the Micro Mist utilises ultra-fine mist particles created through ultrasound, rather than steam, to deliver treatments effectively.

# 1 MICRO MIST HEATING

Micro mist is heated to a temperature of 40-50°C (105-125°F), which helps the hair swell. The cuticles on the surface open up during this process.

# 2 MOLECULAR ACTIVATION

Heated micro mist activates the molecular movement of treatment particles, allowing them to penetrate the hair through the opened cuticles.

The Mist Hair Steamer is equipped with advanced features such as controlled **ultrasonic waves**, delivering high-quality results for hair treatment. It represents a **cutting-edge solution** in the world of hair care, specifically designed for salon environments. This premium steamer promotes healthy hair with treatments that are difficult to replicate elsewhere.

# 3 DEEP PENETRATION

Treatment particles penetrate even deeper into the hair shaft, nourishing the cuticles and supplying CMC (cell membrane complex).

# 4 COOLING AND FIXATION

By rapidly cooling the air, the treatment particles are fixed firmly onto the hair.

# BASIC PROCESS FOR HAIR TREATMENT

## 1. Shampooing:

- Dry hair thoroughly with a towel after shampooing.

## 2. Treatment Application:

- Apply treatment evenly to the hair.
- Ensure hair ends are loose and not overlapping.

## 3. Setting:

- Adjust the hood and ensure the nape pad is secure.
- Use the face guard for smooth operation and avoid direct contact with the customer's face for hygienic use.

## 4. Heating:

- The mist effect wraps the head in warmth and creates a salon-friendly visual appeal.
- Customers will find the mist process engaging.

## 5. Multiple Applications:

- The hood's design allows easy access for multiple treatment applications without readjusting settings.

## 6. Spa-Like Comfort:

- Offers a luxurious and relaxing experience.

## 7. Cooling:

- After heating, cooling starts automatically with a fan, refreshing the air and helping the treatment agent set.
